SHAAN KHAN

Geography Focus | Agentic AI / Robotic Trainer Applicant

Email | Phone | Location | LinkedIn

PROFILE

B.A. final-year student at Maharaja Surajmal Brij University with Geography as a primary academic focus, supported by Political Science, Sociology and independent Class 10–12 mathematics practice. Academic interests include regional geography, map interpretation, surveying, environmental processes and spatial data. Seeking an entry-level Agentic AI / Robotic Trainer role where geographical knowledge, careful observation, structured reasoning and clear written explanations can support training-data review and evaluation tasks.

GEOGRAPHY KNOWLEDGE AND COURSEWORK

- **Climatology and oceanography:** Indian monsoons, jet streams, clouds and precipitation, air masses, fronts and cyclones; climatic classifications, the hydrological cycle, ocean-floor configuration, ocean temperature and salinity.
- **Geography of India:** Location and physiographic divisions; drainage, soils, natural vegetation and wildlife; mineral and energy resources, industrial regions, agriculture, urbanization, migration and population distribution.
- **World regional geography:** Regional classification and the physical and economic geography of Asia, Europe and North America; climate, vegetation, crops, resources, industrial regions and transport links.
- **Geography of Rajasthan:** Climate and drainage, soil conservation, forests and wildlife, mineral and energy resources, industries and tourism; population, tribal communities, desertification and water-conservation initiatives.
- **Cartography and map interpretation:** Map scales, Earth's grid, topographical sheets and conventional signs; qualitative and quantitative maps, including choropleth, isopleth and dot maps. Coursework covers conical, cylindrical, zenithal and conventional map projections.
- **Surveying and geographical data:** Plane-table and prismatic-compass surveying concepts; magnetic bearings, radiation, intersection, open and closed traverses, and bearing corrections. Graphs and diagrams include population pyramids, pie charts, scatter diagrams and traffic-flow diagrams.
- **GIS and remote sensing foundations:** Introductory concepts and uses of geographic information systems, remote sensing and aerial photography within geography coursework.

EDUCATION

Bachelor of Arts | Maharaja Surajmal Brij University, Bharatpur

Pursuing / Final Year | Geography, Political Science and Sociology

Class XII — Humanities | Board of Secondary Education, Rajasthan | 2023

65.20% | First Division | Geography: 83/100, including 30/30 in practical
Sanatan Dharm Shiksha Sadan Senior Secondary School, Dholpur

Class X | Board of Secondary Education, Rajasthan | 2021

85.83% | First Division | Mathematics: 86/100
Ikra Secondary School, Talaiya Road, Dholpur

MATHEMATICS PRACTICE AND QUANTITATIVE FOUNDATION

Independent practice and self-study of Class 10–12 level mathematics, with attention to understanding the problem, working through the solution in a logical order and checking calculations. This complements formal Class X Mathematics and the quantitative elements of university geography and social research.

- **Problem-solving approach:** Step-by-step practice, use of mathematical relationships and review of intermediate calculations and final answers to strengthen numerical reasoning.
- **Geographical applications:** Coursework connects quantitative reasoning with map scales, distances, angles, bearings, graphical representation and interpretation of geographical data.
- **Statistics in coursework:** Mean, median and mode; standard deviation, quartiles, frequency distributions and tabulation, supporting the interpretation and presentation of numerical information.

Class XII academic subjects: Hindi, English, Political Science, History and Geography, with Social Service Plan as an additional subject. Senior-secondary mathematics practice was undertaken independently.

SOCIAL SCIENCE AND RESEARCH FOUNDATION

- **Political systems and governance:** Selected political systems and comparative constitutions; the Indian political system, constitutional principles, Union and State institutions, federalism, the judiciary and local government.
- **Political thought and international relations:** Western political thinkers; post-World War II international relations, the Cold War, the United Nations, Indian foreign policy, non-alignment and regional cooperation.
- **Sociological thought and Indian society:** Classical perspectives associated with Comte, Durkheim, Weber and Marx; social institutions, caste, family, kinship, social change, diversity and Indian sociological traditions.
- **Research methods:** Objectivity, scientific enquiry, research design and hypotheses; primary and secondary sources, sampling, observation, interviews, questionnaires and schedules.
- **Data organization and reporting:** Academic coverage of qualitative and quantitative research, data coding, frequency distributions, tabulation, presentation and report writing.

TRANSFERABLE STRENGTHS FOR AI TRAINING

Academic strengths relevant to entry-level training and evaluation assignments:

- **Geography and spatial reasoning:** A subject foundation relevant to reviewing location-based explanations, interpreting maps and assessing descriptions of physical and human environments.
- **Observation and structured description:** Map-reading and research-method foundations relevant to identifying visible details and organizing descriptions for visual annotation and action-sequence review.
- **Analytical review:** Structured reasoning and independent problem-solving practice relevant to examining whether explanations are clear, logically ordered and internally consistent.
- **Research and communication:** Academic reading, comparison of concepts, organized written explanations and report-writing foundations relevant to documenting review decisions.
- **Independent learning:** Self-directed mathematics practice and multidisciplinary study, with an interest in learning project-specific annotation guidelines and evaluation criteria.

ROLE INTERESTS

Geography-focused AI response evaluation and content review; spatial and map-based reasoning tasks; visual data annotation; and observation-based action-sequence review for Agentic AI / Robotic Trainer assignments.
